OVERVIEW: We will do only one RESEARCH activity this academic year. You may turn in the CASE STUDY early (no earlier than MID-TERM date). It will be due TUESDAY, JANUARY 14th, 2014, so please monitor the date and any other activities you may have assigned you in your other classes. I will not be sympathetic for incomplete, late or weak case studies.

Procrastination is a killer, so please spare yourself. This can be a fun assignment as you select your individual, their life and link them to a clinical psychological disorder. The famous individual does not have to be diagnosed in real life, as you are the psychologist – you make the call. You will become familiar with the DSM-IV to help you determine your disorder. In addition, you will look at aspects and incidents of their life, and determine a disorder. Next you will identify a treatment plan for them using both the Freudian and more recent, cognitive-behavioral approach. I think you will find this assignment interesting. You will have an opportunity to do the assignment by yourself, or with one other student. Why is the due date so far off? Well, you have to have some opportunity to study the basics of psychology and honestly, research and a case study takes time. I will discuss periodically the CASE STUDY in class and there will be assignments to help prevent procrastination and misunderstanding.

**Although there is a new DSM-V; we are only using the DSM-IV (TR)**
SCENARIO:

You are a CLINICAL PSYCHOLOGIST. You have a client (famous dead person who for your purposes, is considered alive for this case study) which fits your disorder selected, who has come to you for help. Obviously, he/she is alive for our purposes. In order to help your client, you must investigate their life in order to draw some inference to a mental disorder they may be afflicted, such as family history, incidents, examples and symptoms. With the exhibited symptoms of your client, you research the DSM-IV to your disorder and complete the CASE STUDY as assigned. The DSM-IV organizes each psychiatric diagnosis into five dimensions (axes) relating to different aspects of disorder or disability:

**Axis I:** Clinical disorders, including major mental disorders, and learning disorders

**Axis II:** Personality disorders and intellectual disabilities (although developmental disorders, such as Autism, were coded on Axis II in the previous edition, these disorders are now included on Axis I)

**Axis III:** Acute medical conditions and physical disorders

**Axis IV:** Psychosocial and environmental factors contributing to the disorder

**Axis V:** Global Assessment of Functioning or Children's Global Assessment Scale for children and teens under the age of 18

Common **Axis I disorders** include depression, anxiety disorders, bipolar disorder, ADHD, autism spectrum disorders, anorexia nervosa, bulimia nervosa, and schizophrenia.

Common **Axis II disorders** include personality disorders: paranoid personality disorder, schizoid personality disorder, schizotypal personality disorder, borderline personality disorder, antisocial personality disorder, narcissistic personality disorder, histrionic personality disorder, avoidant personality disorder, dependent personality disorder, obsessive-compulsive personality disorder, and intellectual disabilities.

Common **Axis III disorders** include brain injuries and other medical/physical disorders which may aggravate existing diseases or present symptoms similar to other disorders.

Once you have researched (and it may take some effort in case you need to pick another selection because of lack of evidence). Now that you have successfully identified the disorder, you will plan to help your client using two approaches. Your intervention will also include two approaches: (1) cognitive-behavioral; and (2) psychoanalytical.

INSTRUCTIONS:

You are to select a deceased famous person (they must be a real person) who you can analyze with the disorder you selected (note the list posted further on these instructions) who can provide you sufficient information to complete the study. No
student (or two students if they are a team) may have the same disorder in each class. Keep in mind, you may have to select another individual if upon your investigation, you cannot “fit your famous person” into the disorder selected. Failure to find sufficient information is not an excuse. Please remember that this is a RESEARCH BASED assignment. You have some liberties in Section I, but they should be interpolated from actual evidence of the individual's life and supported by details. This is going to require investigative research into a famous person, so select someone wisely. Also, I must approve of the individual under study, or any changes of the person. You are to gain independent familiarity to the DSM-IV. That means you must research the DSM-IV on your own. Our MEDIA CENTER has 2 DSM-IVs, and I have one in my room which you can utilize only in my room as it will not be signed out. Your Section II requires you to think and act like a psychologist. You are to turn in a written CASE STUDY (WEIGHT: 200 points) on or before the due date posted. For the case study, use MLA guidelines.

*MLA paper format guidelines (use of parenthetical citations and separate works cited page). In addition,*

- Typed (or word-processed) only
- Font-12 (Arial)
- One-inch margins
- Front side only
- Double-spaced between lines (MLA guidelines)
- Includes one graphic (centered, labeled and referred to in the text on the same page as the graphic); Label used in the text and bolded in print for easy identification.
- 150-word abstract located at the top of the first page before your paper begins
- Written in THIRD person
- Missing parenthetical or works cited page will result in a grade no higher than 69%
- Five professional sources (no Wikipedia, no dictionary, no encyclopedia, no textbook). Sources are to be professional sites, journals, periodicals, etc.
- Academic honesty statement written below the conclusion with at least 1 inch line separation. Students will include and initial at the end of the statement: Failure to include the page will result in a grade no higher than 79%

This assignment (paper) represents my own work. I have not incorporated into this assignment (paper) any unacknowledged material from the work of another person, including papers, words, ideas, information, data, evidence-organizing principles, or style of presentation taken from the Internet, books, periodicals, or other sources. Without appropriate credit given (your initials)

Failure to include the honesty statement will result in a 20% deduction

It doesn’t matter if it is a ‘case study’ or a ‘research paper’ the level of research and details is the same. The format follows the structure of a CASE STUDY used by many colleges. **MAKE SURE YOU KNOW THE RUBRIC** as you complete this CASE STUDY.

You must use the DSM-IV. You can go to a book store and look at a DSM-IV or public library or our Media Center. As I mentioned, I have one in class, but it must stay in the class and use is only on a scheduled basis with me before school or at lunchtime. This can be a fun and rewarding opportunity, but procrastination will only result in a lower grade for the CASE STUDY.

I will begin discussing the CASE STUDY in class and take any questions to help you through this journey.
In addition, from time-to-time we may have additional HOMEWORK requirements to gauge your efforts to keep a timeline and not procrastinate.

Please choose from among the following DISORDERS to conduct your CASE STUDY:

1. Generalized Anxiety Disorder
2. Post Traumatic Stress Disorder
3. Bipolar Disorder
4. Schizophrenia
5. Obsessive-Compulsive Disorder
6. Eating Disorder: Anorexia or Bulimia
7. Agoraphobia
8. Anti-Social Personality Disorder
9. Dissociative Identity Disorder
10. Borderline Personality Disorder
11. Major Depressive Disorder

DUE DATE: Tuesday, January 14th (CASE STUDY)
USE THE RUBRIC in order to know the guidelines for which the CASE STUDY will be constructed and evaluated.

I. Abstract

Tell the reader (me) what you're are going to tell them, briefly and give me some interesting facts to draw me in the case.

II. Case History

1. Background Information

The first section of your paper will present your client’s (your person under study) background. Include factors such as age, gender, work, health status, family mental health history, family and social relationships, drug and alcohol history, life difficulties, goals, and coping skills and weaknesses. You may have some liberties with this section, but make sure it is based on factual evidence.

2. Description of the Presenting Problem

In the next section of your case study, you will describe the problem or symptoms that the client (your person under study) presented with to you (the psychologist). Describe any physical, emotional, or sensory symptoms reported by the client. Thoughts, feelings, and perceptions related to the symptoms should also be noted. These should be based on your research of the client’s life. Any screening or diagnostic assessments that are used should also be described in detail and all scores reported.

3. Diagnosis

Provide your diagnosis and give the appropriate DSM-IV code. Explain how you reached your diagnosis supportive of the DSM-IV, how the clients symptoms fit the diagnostic criteria for the disorder(s), or any possible difficulties in reaching a diagnosis. You must ADDRESS the axes. The specific DSM-IV breaks the diagnosis into FIVE multiple levels (axes) relating to different aspects of the disorder or disability:

- **Axis I**: Clinical disorders, including major mental disorders, and learning disorders
- **Axis II**: Personality disorders and mental retardation (although developmental disorders, such as Autism, were coded on Axis II in the previous edition, these disorders are now included on Axis I)
- **Axis III**: Acute medical conditions and physical disorders
- **Axis IV**: Psychosocial and environmental factors contributing to the disorder
- **Axis V**: Global Assessment of Functioning or Children's Global Assessment Scale for children and teens under the age of 18

Researching the DSM-IV on your own will help you understand the axes interpretation. We will discuss these from time-to-time in class to help you too.

III. Intervention
The second section of your paper will focus on the intervention used to help the client. I am requiring you use the following two theoretical approaches. You are to choose an appropriate GRAPHIC to include in either one approach or both approaches (your choice). It must be appropriate. You are to choose a balanced approaches showing understanding between the two approaches. These are to demonstrate your knowledge which your research, class discussions and readings. Each should be no less than 2 pages for each approach.

1. Psychoanalytic Approach

Describe how a psychoanalytic therapist would view the client’s problem. Provide some background on the psychoanalytic approach and cite relevant references. Explain how psychoanalytic therapy would be used to treat the client, how the client would respond to therapy, and the effectiveness of this treatment approach.

2. Cognitive-Behavioral Approach

Explain how a cognitive-behavioral therapist would approach treatment. Offer background information on this therapeutic approach and describe the treatment sessions, client response, and outcome of this type of treatment. Make note of any difficulties or successes encountered by your client during treatment.

IV. REFERENCES

Cite DSM-IV and 1 professional source along with a minimum of 5 sources (or more) for your CASE STUDY. You cannot use Wikipedia.

We have THREE copies available at West Shore. I have a personal copy which can be used ONLY in my room (before school) and we have TWO copies in the MEDIA CENTER (Reference)
